ABSTRACT OF THE DISCLOSURE

        In an information processing apparatus
connectable to a terminal through a network, a terminal type
of the terminal is specified based on a first request

5   requesting Web information, said first request sent from the
terminal through the network, and reference Web information
is generated so as to include reference path created by adding
terminal type information showing the specified terminal
type to a path indicated in the first request for accessing

10   the Web information and to allow the terminal to
automatically accesses to the reference path. Then, the
reference Web information is sent to the terminal as a
response with respect to the first request, and a second
request for requesting the Web information specified by the

15   reference path is received.
